

I claim:

1. A device for setting different ear attachment methods on earrings; said device is comprised of a universal female connector and a plurality of removable and selectable male connectors; where said female connector is comprised of a side that is attached to the back of the earring, a female receptacle and a mechanism to lock in place a selectable and attachable male connector to said female connector, and where each of the said selectable male connector implements a different method of attaching an earring to an ear.
2. The universal ear attachment of claim 1 wherein: the female receptacle is perpendicular to said side that attaches to the earring.
3. The universal ear attachment of claim 1 wherein: the female receptacle is parallel and along said side that attaches to the earring.
